### CLOUD SIMULATION MODEL CLOUD ENVIRONMENT USING CLOUD SIM

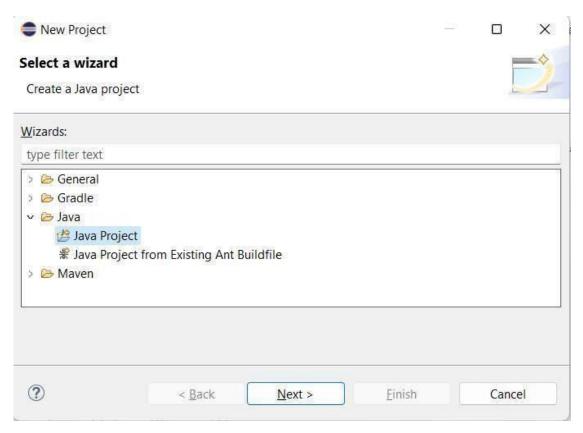

## AIM:

To model the cloud environment using cloud sim tools.

#### **PROCEDURE:**

- 1. Now within the Eclipse window navigate the menu: File -> New -> Project, to open the new project wizard.
- 2. Select the 'Java Project' from the window popup and click Next.
- 3. Unselect the 'Use default location' option and then click on 'Browse' to open the path where you have unzipped the Cloudsim project and finally click Next to set project settings.
- 4. Now select the example program from folder examples from the unzipped folder.
- 5. Run the sample program

# **OUTPUT:**

```
Run History
Run As
Run Configurat
                                                                                                                                         /** T

                   public class CloudSimExample1 {
                                    /** The vmlist. */
private static List<Vm> vmlist;
                                                                                                                                                                                                                                          CloudSimExample1 finished!
                                    /**
 * Creates main() to run this example.
                                                * @param args the args
                                     public static void main(String[] args) {
                                                       Log.printLine("Starting CloudSimExample1...");
                                                    try {
    // First step: Initialize the CloudSim package. It should be called
    // before creating any entities.
    int num_user = 1; // number of cloud users
    Calendar calendar = Calendar.getInstance();
    boolean trace_flag = felse; // mean trace events
                                                                           // Second step: Create <u>Datacenters</u>
// <u>Datacenters</u> are the resource providers in CloudSim. We need at
// list one of them to run a CloudSim simulation
Datacenter datacenter0 = createDatacenter("Datacenter_o");
                                                                           // Third step: Create Broker
```

## **RESULT:**

Thus, the cloud environment was modeled using the cloud sim tool and eclipse.
